Introduction

The Center of Excellence for Functional Surfaces and Interfaces for Nano diagnostics (EFSUN) was established in September 2016. The Center aims at the discovery of efficient tools for an early, efficient accurate, cheap and on-site diagnosis of important health problems using nanotechnology tools. Highly qualified local researchers in various fields, including medicine, molecular biology, genetics, pathology, chemistry, physics, engineering, nanotechnology and electronics were brought together in the center in order to generate original, innovative and patentable knowledge and produce high impact research. Moreover, interdisciplinary nature of the center facilitates coordinated interactions between members from different fields to reach a common goal of generation of high-tech nano-based diagnostic devices. The advisory board consists of outstanding and experienced researchers from the best institutes and universities in the US and in Europe. As such, EFSUN aims to become a center of reference in the fields of nanotechnology and medical diagnostics in Turkey, in the region, and it welcomes motivated researchers who would like to join forces to reach this goal.

In the EFSUN Center, using micron- and submicron-sized systems, researchers exploit cutting edge tools of medicine, molecular biology, bioinformatics, material science, nano technology, nano/microfluidics, physics, physical chemistry, electrics and electronics. Current activities of the center include research on clinical activities, biobanking, molecular biology, genetics and biochemistry of diseases, omics approaches, patient-centered, research on chemistry and material fundamentals, surface and interface interaction studies, power generation in small scale along with targeted device design.

The Center was founded by 5 scientists who were soon joined by 22 scientists being world-class experts in their respective fields. Contributing members are recipients of various prestigious national and international awards. Several joint grant applications have been already made. Collaborations with the industry are ongoing. High impact publications, invited talks, conference presentations and seminars increase visibility of the center.

This catalog is intended to provide a collection of the research activities of the center along with a short bio of contributing researchers.
